

CLMA Presentation — Run of Show

One hour, then live demo and Q&A, then portal walkthrough for interested members. Keep it to four things: Map. Amanda. Vendor intelligence. Board visibility.

0–5 min Establish credibility, very little selling

Say: "You already know Bedrock from Canyon Gate at Cinco Ranch and Waterview. Rather than spend an hour on generic company talk, we spent our time understanding how CLMA actually operates."

Do: Deck slides 1–3. Land that CLMA is an operations organization, not a homeowner HOA.

5–12 min Their current operating model

Do: Walk what you learned: landscape vendors, irrigation, trees, projects, financials, contracts, RFPs, documents, board decisions. Deck slides 4–5.

Say: "The question was not how to put CLMA into HOA software. It was: how much of this work can the system actually perform?"

12–18 min Traditional software vs. an AI management team (keep short)

Say: "Modern association platforms are very good at organizing information. We used systems like these ourselves. trustEd started with a different question: can the software actually do some of the management work?" Then move on. Do not spend ten minutes on comparisons.

Do: Deck slide 6, then stop.

18–28 min The asset map — first wow moment

Do: Open the map in Chrome, full screen. Click the RED esplanade pin, then the RED irrigation pin. Two pins, then get out. Do not tour all six.

Say: Esplanade: "Here is an actual asset. Here is the vendor, the issue, the quote, and the decision waiting for the board." Irrigation: "Third repair this year, thirty-one percent over budget. trustEd is not just saying something broke, it is giving management context."

28–38 min Amanda performs management work — the bid review

Do: Open the already-generated review of the landscape bid (pre-staged in Communications). Show scope compared, exceptions found, questions raised, sources shown.

Say: "Amanda is not summarizing a document. She is preparing the decision." Point out she caught the true annual cost and the termination penalty on her own.

38–45 min Ask Amanda — grounded, and honest about limits

Do: Introduce her now, not before: "Everything you have seen runs on the same knowledge layer. Amanda is our AI community manager." Ask 2 she nails, show the citation each time:

- "What is the quorum under CLMA's bylaws?"
- "What areas is CLMA responsible for under the maintenance agreement?"

Do: Then ask one she cannot answer: "What is our irrigation variance year to date?" She says she does not have it and offers to flag it for the team.

Say: "That answer matters to me. One thing we have spent real time on is teaching these agents when NOT to answer."

45–52 min Put the pieces together — the operating loop

Say: "Field issue, asset identified, vendor engaged, proposal analyzed, cost evaluated, board decides, work tracked, financial impact recorded, board package updated. That is why we call this an AI management team, not an AI feature."

52–60 min Transition and questions

Say: "Technology does not eliminate accountability. We are still responsible for the work. What it changes is how little gets lost, how fast things move, and how much the board can see." Then explain onboarding briefly, and stop talking. Let them interrogate you.

Before the room:

Pre-stage the bid review that morning (forward the sample bid to Amanda, generate her draft) so you click into it, not wait on email live. Open the map in Chrome and confirm tiles load. Do NOT show another community's real data. Do NOT tour every feature.

If they remember four things: Map. Amanda. Vendor intelligence. Board visibility.
